

GROWER: RANDY PADGETT

LOCATION: ARCADIA, FLORIDA

CROP: JIGGS BERMUDA GRASS

RESULTS:

“Below is a field of Jiggs Bermuda grass. Since the 2nd week in May this field has had one crop of planting grass and 2 cuttings of hay. The field is in need of being cut right now, however the weather has prevented harvest. This field has had one application of dry fertilizers 16-8-8 with minors at a rate of 400 lbs per acre. I was applied the first week in April. One application of C-CAT, at 1 gallon per acre with Liquid Tech All Purpose adjuvant, at a rate of 1 quart per 100 gallons of water was applied after the planting cutting was taken. No other fertilizer has been applied as of Sept. 16, 2009 and the grass just keeps coming back as though it has been fertilized after each cutting of hay. I do plan to fertilize the field with UAN 32% and the C-CAT after the next cutting of hay.” Randy Padgett 1-863-990-4982
