

GROWER: BETHEL FARMS

LOCATION: FLORIDA

CROP: CAPTIVA ST AUGUSTINE

RESULTS:

“We had a block of Captiva St. Augustine that was roughly 9 months in age, we were not happy with the overall root development. We applied the C-CAT at a rate of 1 gallon per acre and approximately 21 days post application we were harvesting with confidence. Not only did we see an increase in root mass, but we experienced a favorable color response that can still be seen 60 days after initial application. I am looking forward to trying C-CAT under different applications and anticipate favorable results going into winter.” Jamie Tedder
