

GROWER: PARTIN SEED AND SOD

LOCATION: ST. CLOUD, FL

SOD MANAGER: ALLAN KERSEY

CROP: FLORATAM SOD

RESULTS:

“We were having problems with the sod and were not able to lift it. We applied 1 gallon of C-CAT and 1 quart per 100 gallons of water of Liquid Tech All Purpose Adjuvant. In a 2 week time period the sod that we had sprayed had thickened up and we were able to lift it, to this date we have not been able to lift the sod that was not sprayed. We also saw a better color in the sod that was sprayed. It was well worth the investment on the C-CAT and Adj.; we look forward to using more of the combination. Below you can see the difference in the sod, the picture on the left has the C-CAT and Adj., and the picture on the right does not. The pictures tell the whole story.”
