

Crop: Corn

Location: Cape County, MO

Program:

A series of foliar programs were used on late planted corn plots to observe the effects of TEVA Foliar products. Programs are listed in the chart below.

Results: The foliar programs averaged around a 20 bushel increase over the check.

| Program | Products Used |
|---------|------------------------------------------------------------|
| 1 | ComPlex Only, 3 applications |
| 2 | ComPlex, C-Cat, and MMTS, 3 applications |
| 3 | C-Cat, MMTS, TEVA Traces, and 3-18-18, 2 applications |
| 4 | C-Cat, MMTS, TEVA Traces, and 3-18-18, weekly applications |
