

Crop: Soybeans

Location: Cape County, MO

Program:

A series of TEVA foliar products were used against a check to observe the effectiveness of TEVA foliar products. Pod counts and seed weights were used to estimate bushels per acre at a 110K planting population.

Results: TEVA foliar programs made as much as a 13 bushels per acre difference on the end yield in soybeans.

Program	Products Used
Program 1	C-Cat, MMTS, Ca, B, Zn, Mn
Program 2	C-Cat, MMTS, Ca, B, Zn, Mn, and 3-18-18
Program 3	C-Cat, MMTS, Ca, B, Zn, Mn, 3-18-18, and 0-0-24(at R3)
Program 4	C-Cat, MMTS, Ca, B, Zn, Mn, 3-18-18, 0-0-24(at R3), and Complex
